Check-list of the Birds of Mexico

THE 1064 NUMBERED SPECIES included on the check-list are of regular occurrence on the mainland, offshore islands, and oceanic waters within 200 miles of Mexican territory or halfway to the nearest foreign territory, whichever is closer. Forms **ENDEMIC TO MEXICO** are shown in boldfaced capitals. The **regional endemics** shown in lower-case boldface range from Mexico into northern Central America (north of Costa Rica) or the borderlands of the United States. Authority for taxonomy and nomenclature in the present list: *IOC World Bird List v9.1* (<https://www.worldbirdnames.org/ioc-lists/master-list-2/>). Numerous distinctive subspecies are shown indented and unnumbered; taxa consisting of more than one subspecies are labeled "Group." Subspecies marked **BLI** are treated as full species by BirdLife International and *Handbook of the Birds of the World*. Common names of subspecies are provided for convenience only; some are placeholders of our own devising. An additional 84 species that occur only as accidental visitors, or appear to be extirpated from Mexico, or are considered to be extinct in the wild, are listed below.
